My career goal is to work as a Software Developer in challenging environment which will allow me to contribute to design and development of first-class software solutions both modern and reliable for company's customers. I am keen to find challenging role where I am pushed to learn new skills.

Employment History

2019 - present
.NET Developer at Lumen
As part of the Financial Intelligence Department, I am responsible for design, development and deployment of tools that reduce manual workload of colleagues from Financial Department.

Projects I worked on to this date:

- Automation processing of the invoices coming by email – 90% manual task reduction – total of 120 hours saving for the Financial Department.

- Monthly reporting tool that submits Tax Reports along with invoice scans to external company – total saving £1500.00 per month.

- Various API services that handle data provided by third party companies – total saving of 90 hours per month.

- Dynamic Intake Forms – development of internal website that renders JSON definition of the intake form provided from SQL Server utilising Angular and .NET Core Web API

- Sales Pricing Solution – implemented solution that allowed sales representatives provide accurate pricing for customers based on corporate regions. This allowed to win 5% more contracts in EMEA.

Education

2016
Bachelor of Computer Science & Information Technology
West Pomeranian University of Technology in Szczecin, Poland

2014
